Past Performance

<p>Nation-wide Construction Client</p>	<p>Delivered predictive maintenance solution to improve profitability by reducing downtime at project sites. The BI solution enabled transparency in operations and insights for engineers to resolve equipment issues proactively before a shutdown was necessary.</p>
<p>Global Consumer Products Client</p>	<p>Delivered PLM platform to increase collaboration and optimize time –to-market for new products. Our team consolidated production data from multiple legacy applications to create a single source of truth for their current product catalog including Bill-of-Materials.</p>
<p>Large Retail Client</p>	<p>Provided Software engineering using SAP ERP powered by SAP HANA, SAP Business Objects, and SAP BW on HANA. Our services provided the client with an in memory ERP platform along with improved data quality, better accuracy of reports, and confidence in KPI metrics to enable better planning and forecasting.</p>
<p>Major US Oil & Gas Client</p>	<p>Provided IT Management Consulting for the major US Oil producer. Our team worked with Chesapeake to define the future state, procure software and licensing, staffing for the engagement, solution blueprinting, and leadership of technical teams to deliver software applications and components. The outcomes of this engagement will transform how this organization does business by enabling corporate governance, consolidated reporting and planning and improved cost to completion for well exploration and drilling.</p>
<p>(HIPAA-compliant) Health Care Solution</p>	<p>Project involved creating a native Android tablet app that allowed secure data collection by ambulance drivers that synced in real time, with dispatch and billing teams to take internal action. The app was designed to ensure the ease of capturing patient data, that included on-screen signatures panels and several interactive custom forms.</p>
<p>(LMS) Learning Management Software</p>	<p>Project involved developing a custom web application driven by a PHP/MySQL build that outputs JSON to customer-facing pages. The web portal allows users to view important reports, dynamic content, take and manage surveys, all in a highly customizable and branded environment for each client. The solution resulted in quicker customer deployment, because the admin portal allowed our Customer to manage every aspect of their existing customer base and make changes/updates in real-time.</p>
<p>(Start-Up) Company Start-Up or Entrepreneur</p>	<p>Developed Prototype to help with the treatment of epilepsy and depression by creating a solution worn in clothes that provided various neuro-signals to the wearer. The prototype has been used as a proof of concept and is in second round of funding stage.</p>
<p>Media Solution</p>	<p>Project included building a custom video streaming application for a TV platform. We had to successfully complete user acceptance testing in a real world environment, analyzing streaming methodologies and customer interaction.</p>
<p>On-line Education and Training</p>	<p>Developed LMS system that tracks product training and knowledge for sales organization. Solution resulted in faster delivery of training materials, customized remediation that is self-paced, and real-time reporting for management team to identify and analyze data, to better assist with product training needs.</p>
